REGENTS HIGH SCHOOL EXAMINATION

REGENTS EXAMINATION

IN

ENGLISH LANGUAGE ARTS

Wednesday, August 16, 2023 — 8:30 to 11:30 a.m., only

The possession or use of any communications device is strictly prohibited when taking this examination. If you have or use any communications device, no matter how briefly, your examination will be invalidated and no score will be calculated for you.

A separate answer sheet has been provided for you. Follow the instructions for completing the student information on your answer sheet. You must also fill in the heading on each page of your essay booklet that has a space for it, and write your name at the top of each sheet of scrap paper.

The examination has three parts. For Part 1, you are to read the texts and answer all 24 multiple-choice questions. For Part 2, you are to read the texts and write one source-based argument. For Part 3, you are to read the text and write a text-analysis response. The source-based argument and text-analysis response should be written in pen. Keep in mind that the language and perspectives in a text may reflect the historical and/or cultural context of the time or place in which it was written.

When you have completed the examination, you must sign the statement printed at the bottom of the front of the answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet cannot be accepted if you fail to sign this declaration.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.

Part 1

Directions (1–24): Closely read each of the **three** passages below. After each passage, there are several multiple-choice questions. Select the best suggested answer to each question and record your answer on the separate answer sheet provided for you. You may use the margins to take notes as you read.

Reading Comprehension Passage A Of Time and Third Avenue

The following excerpt from a short story takes place at Mr. Macy's tavern in 1951.

What Macy hated about the man was the fact that he squeaked. Macy didn't know if it was the shoes, but he suspected the clothes. In the back room of his tavern, under the poster that asked: WHO FEARS MENTION THE BATTLE OF THE BOYNE? Macy inspected the stranger. He was tall, slender, and very dainty. Although he was young, 5 he was almost bald. There was fuzz on top of his head and over his eyebrows. Then he reached into his jacket for a wallet, and Macy made up his mind. It was the clothes that squeaked.

"MQ, Mr. Macy," the stranger said in a staccato¹ voice. "Very good. For rental of this back room included exclusive utility for one chronos—"

10 "One whatos?" Macy asked nervously.

"Chronos. The incorrect word? Oh yes. Excuse me. One hour."

"You're a foreigner," Macy said. "What's your name? I bet it's Russian." ...

15 "MQ. Boyne." Mr. Boyne opened a wallet shaped like an accordion, ran his fingers through various colored papers and coins, then withdrew a hundred-dollar bill. He jabbed it at Macy and said: "Rental fee for one hour. As agreed. One hundred dollars. Take it and go."

Impelled by the thrust of Boyne's eyes, Macy took the bill and staggered out to the bar. Over his shoulder he quavered: "What'll you drink?"

"Drink? Alcohol? Pfui!" Boyne answered.

20 He turned and darted to the telephone booth, reached under the pay phone and located the lead-in wire. From a side pocket he withdrew a small glittering box and clipped it to the wire. He tucked it out of sight, then lifted the receiver.

"Coordinates West 73-58-15," he said rapidly. "North 40-45-20. Disband sigma. You're ghosting..." After a pause, he continued: "Stet. Stet! Transmission clear. I want a fix on 25 Knight. Oliver Wilson Knight. Probability to four significant figures. You have the coordinates.... 99.9807? MQ. Stand, by...."

Boyne poked his head out of the booth and peered toward the tavern door. He waited with steely concentration until a young man and a pretty girl entered. Then he ducked back to the phone. "Probability fulfilled. Oliver Wilson Knight in contact. MQ. 30 Luck my Para." He hung up and was sitting under the poster as the couple wandered toward the back room. ...

The girl said: "We hate to intrude, but this is the only place in town where you can get genuine Stone ginger beer."

"Already aware of the fact, Miss Clinton." To Macy he said: "Bring ginger beer and go."

¹staccato — abrupt

35 No other guests. These are all I'm expecting."

Knight and the girl stared at Boyne in astonishment as they sat down slowly. Knight placed a wrapped parcel of books on the table. The girl took a breath and said, "You know me ... Mr. ...?"

40 "Boyne. As in Boyne, Battle of. Yes, of course. You are Miss Jane Clinton. This is Mr. Oliver Wilson Knight. I rented [the] premises particularly to meet you this afternoon." ...

"You couldn't know we were coming here," Jane said. "We didn't know ourselves ... until a few minutes ago."

45 "Sorry to contradict, Miss Clinton," Boyne smiled. "The probability of your arrival at Longitude 73-58-15 Latitude 40-45-20 was 99.9807 per cent. No one can escape four significant figures." ...

Jane tried to rise. "I ... I think we'd b-better be go—"

50 Boyne waved her back, and she sat down like a child. To Knight he said: "This noon you entered premises of J.D. Craig & Co., dealer in printed books. You purchased, through transfer of money, four books. Three do not matter, but the fourth ..." He tapped the wrapped parcel emphatically. "That is the crux² of this encounter." ...

"One bound volume consisting of collected facts and statistics."

"The almanac?" ...

"You intended to purchase a 1950 almanac."

"I bought the '50 almanac."

55 "You did not!" Boyne blazed. "You bought the almanac for 1990."

"What?"

"The World Almanac for 1990," Boyne said clearly, "is in this package. Do not ask how. There was a carelessness that has already been disciplined. Now the error must be adjusted. That is why I am here. It is why this meeting was arranged. You cognate?"³

60 Knight burst into laughter and reached for the parcel. Boyne leaned across the table and grasped his wrist. "You must not open it, Mr. Knight."

"All right." Knight leaned back in his chair. He grinned at Jane and sipped ginger beer. "What's the payoff on the gag?"

65 "I must have the book, Mr. Knight. I would like to walk out of this tavern with the almanac under my arm." ...

"If," said Knight, "there was such a thing as a 1990 almanac, and if it was in that package, wild horses couldn't get it away from me."

"Why, Mr. Knight?"

70 "Don't be an idiot. A look into the future? Stock market reports ... Horse races ... Politics. It'd be money from home. I'd be rich." ...

"Excuse me," Boyne said keenly, "but you are only repeating the dreams of childhood. You want wealth. Yes. But only won through endeavor ... your own endeavor. There is no joy in success as an unearned gift. There is nothing but guilt and unhappiness. You are aware of this already."

75 "I disagree," Knight said.

"Do you? Then why do you work? Why not steal? Rob? Burgle? Cheat others of their money to fill your own pockets?" ...

"Then I'd just want to know if I would be successful."

80 "Ah? Stet. You wish to thumb through the pages looking for your name. You want reassurance. Why? Have you no confidence in yourself? You are a promising young

²crux — point

³cognate — understand

attorney. Yes, I know that. It is part of my data. Has not Miss Clinton confidence in you?"

"Yes," Jane said in a loud voice. "He doesn't need reassurance from a book." ...

"Do you enjoy games won by cheating?"

"Not as a rule."

85 "They are thisney, yes? Boring. They are tiresome. Pointless. Null-coordinated. You wish you had won honestly."

"I suppose so."

90 "And you will suppose so after you have looked at this bound book. Through all your pointless life you will wish you had played honestly the game of life. You will verdash that look. You will regret. You will totally recall the pronouncement of our great poet-philosopher Trynbyll who summed it up in one lightning, skazon line. '*The Future is Tekon*,' said Trynbyll. Mr. Knight, do not cheat. Let me implore you to give me the almanac."

"Why don't you take it away from me?"

"It must be a gift. We can rob you of nothing. We can give you nothing."

95 "That's a lie. You paid Macy to rent this back room."

"Macy was paid, but I gave him nothing. He will think he was cheated, but you will see to it that he is not. All will be adjusted without dislocation." ...

"What should we do? If everything he says is true we can refuse and live happily ever after."

100 "No," Jane said in a choked voice. "There may be money and success in that book, but there's divorce and death, too. Give him the almanac."

"Take it," Knight said faintly. ...

105 "My gratitude," he said. "You have eased a precarious⁴ situation. It is only fair you should receive something in return. We are forbidden to transfer anything that might divert existing phenomena streams, but at least I can give you one token of the future."

He backed away, bowed curiously, and said: "My service to you both." Then he turned and started out of the tavern.

"Hey!" Knight called. "The token?"

"Mr. Macy has it," Boyne answered and was gone. ...

110 "But it doesn't make sense." Knight began to laugh again. "All that business about paying Macy but not giving him anything. And I'm supposed to see that he isn't cheated. And the mystery token of the future ..."

115 The tavern door burst open and Macy shot through the saloon into the back room. "Where is he?" Macy shouted. "Where's the thief? Boyne, he calls himself. More likely his name is Dillinger."⁵ ...

"He's gone," Knight said. "He left just before you got back." ...

"He paid me one hundred dollars to rent this back room," Macy cried in anguish. "One hundred dollars. I took the bill over to Bernie the pawnbroker, being cautious-like, and he found out it's a forgery. It's a counterfeit." ...

120 Knight inspected it closely. Suddenly he turned pale and the laughter drained out of his face. He reached into his inside pocket, withdrew a checkbook and began to write with trembling fingers.

"What on earth are you doing?" Jane asked.

125 "Making sure that Macy isn't cheated," Knight said. "You'll get your hundred dollars, Mr. Macy."

"Oliver! Are you insane? Throwing away a hundred dollars..." ...

"Look at the bill," Knight said in a shaky voice. "Look closely."

⁴ precarious — hazardous

⁵ John Dillinger — an American gangster who robbed banks

It was beautifully engraved and genuine in appearance. Benjamin Franklin's benign⁶ features gazed up at them mildly and authentically; but in the lower right-hand corner was printed: Series 1980 D. And underneath that was signed: Oliver Wilson Knight, Secretary of the Treasury.

—Alfred Bester
excerpted and adapted from “Of Time and Third Avenue”
Virtual Unrealities, 1997
Vintage Books

⁶benign — kind

- 1 Lines 8 through 16 create a mood of
(1) tension (3) fear
(2) mystery (4) melancholy

2 As used in line 17, the word “Impelled” most likely means
(1) embarrassed (3) forced
(2) reassured (4) distracted

3 The statement “Probability fulfilled” (line 29) reveals that Boyne
(1) was certain Knight understood the importance of the meeting
(2) was hoping Knight would arrive at the arranged time
(3) knew he was likely to meet Knight at this location
(4) knew he could convince Knight to bring Jane

4 Based on Boyne’s actions in lines 23 through 29, lines 41 through 45 confirm that Boyne
(1) is able to manipulate people’s actions
(2) is able to change people’s goals
(3) has experience as a detective
(4) has knowledge of future events

5 The interaction in lines 39 through 46 indicates
(1) Jane’s apprehensive feelings
(2) Knight’s dismissive attitude
(3) Boyne’s delusional thinking
(4) Boyne’s excessive demands

6 The “carelessness that has already been disciplined” (line 58) refers to the
(1) sale of an almanac that reveals future information
(2) possession of an almanac that ensures future success
(3) misleading statistics presented in the almanac
(4) incorrect title on the cover of the almanac

7 Lines 83 through 89 suggest that a meaningful life requires
(1) luck (3) foresight
(2) integrity (4) cooperation

8 The statement “All will be adjusted without dislocation” (line 97) indicates that by returning the almanac
(1) the future will proceed without change
(2) Knight’s actions will not be punished
(3) Macy’s agreement will not be honored
(4) the past will be accepted without regret

9 The description in lines 120 through 122 communicates that Knight
(1) recognizes that Boyne’s claims were true
(2) feels deceived by the actions of Boyne
(3) has regrets that he did not keep the almanac
(4) is relieved that he did not read the almanac

10 The “beautifully engraved” bill (line 128) symbolizes Knight’s
(1) future marriage (3) trusting nature
(2) admirable character (4) successful career

Reading Comprehension Passage B

Native Memory

The following poem is the poet's reflection upon Little River Canyon, part of the Cherokee Nation homeland prior to their forced removal and relocation west of the Mississippi in the early 19th century.

River was my first word

after mama.

I grew up with the names of rivers
on my tongue: the Coosa,

- 5 the Tallapoosa, the Black Warrior;
the sound of their names
as native to me as my own.

I walked barefoot along the brow of Lookout Mountain
with my father, where the Little River

- 10 carves its name through the canyons
of sandstone and shale
above Shinbone Valley;
where the Cherokee
stood on these same stones
15 and cast their voices into the canyon below.

You are here, a red arrow
on the atlas tells me
at the edge of the bluff
where young fools have carved their initials
20 into giant oaks

- and spray painted their names and dates
on the canyon rocks,
where human history is no more
than a layer of stardust, thin
25 as the fingernail of god.

What the canyon holds in its hands:
an old language spoken into the pines
and carried downstream
on wind and time, vanishing
30 like footprints in ash.

- The mountain holds their sorrow
in the marrow of its bones.
The body remembers
the scars of massacres,
35 how the hawk ached to see
family after family

dragged by the roots
from the land of their fathers.

- Someone survived to remember
40 beyond the weight of wagons and their thousands
of feet cutting a deep trail of grief.
Someone survived to tell the story of this
sorrow and where they left their homes
and how the trees wept to see them go
45 and where they crossed the river
and where they whispered a prayer into their grandmother's eyes
before she died
and where it was along the road they buried her
and where the oak stood whose roots
50 grew around her bones
and where it was that the wild persimmons grow
and what it was she last said to her children
and which child was to keep her memory alive
and which child was to keep the language alive
55 and weave the stories of this journey into song
and when were the seasons of singing
and what were the stories that go with the seasons
that tell how to work and when to pray
that tell when to dance and who made the day.
- 60 *You are here*
where bloodlines and rivers
are woven together.
I followed the river until I forgot my name
and came here to the mouth of the canyon
65 to swim in the rain and remember
this, the most indigenous joy I know:
to wade into the river naked
among the moss and stones,
to drink water from my hands
70 and be alive in the river, the river saying,
You are here,
a daughter of stardust and time.

—Ansel Elkins

Reading Comprehension Passage C

The Music in You

Twenty years ago, a pair of psychologists hooked up a shoe to a computer. They were trying to teach it to tap in time with a national anthem. However, the job was proving much tougher than anticipated. Just moving to beat-dominated music, they found, required a grasp of tonal organisation and musical structure that seemed beyond the reach of an ordinary person without special training. But how could that be? Any partygoer can fake a smile, reach for a cheese cube and tap her heel to an unfamiliar song without so much as a thought. Yet when the guy she's been chatting with tells her that he's a musician, she might reply: 'Music? I don't know anything about that.'

Maybe you've heard a variation on this theme: 'I can't carry a tune to save my life.' Or: 'I don't have a musical bone in my body.' Most of us end up making music publicly just a few times a year, when it's someone's birthday and the cake comes out. Privately, it's a different story — we belt out tunes in the shower and create elaborate rhythm tracks on our steering wheel. But when we think about musical expertise, we tend to imagine professionals who specialise in performance, people we'd pay to hear. As for the rest of us, our bumbling, private efforts — rather than illustrating that we share an irresistible impulse to make music — seem only to demonstrate that we lack some essential musical capacity.

But the more psychologists investigate musicality, the more it seems that nearly all of us are musical experts, in quite a startling sense. The difference between a virtuoso¹ performer and an ordinary music fan is *much* smaller than the gulf between that fan and someone with no musical knowledge at all. What's more, a lot of the most interesting and substantial elements of musicality are things that we (nearly) all share. We aren't talking about instinctive, inborn universals here. Our musical knowledge is *learned*, the product of long experience; maybe not years spent over an instrument, but a lifetime spent absorbing music from the open window of every passing car. ...

It's easy to test out the basics of this acquired knowledge on your friends. Play someone a simple major scale, Do-Re-Mi-Fa-Sol-La-Ti, but withhold the final Do and watch even the most avowed² musical ignoramus start to squirm or even finish the scale for you. Living in a culture where most music is built on this scale is enough to develop what seems less like the knowledge and more like the *feeling* that this Ti must resolve to a Do. ...

When people grow up in places where music is constructed out of different scales, they acquire similarly natural responses to quite different musical elements. Research I've done with Patrick Wong of Northwestern University in Illinois has demonstrated that people raised in households where they listen to music using different tonal systems (both Indian classical and Western classical music, for example) acquire a convincing kind of bimusicality, without having played a note on a sitar³ or a violin. So strong is our proclivity⁴ for making sense of sound that mere listening is enough to build a deeply internalised mastery of the basic materials of whatever music surrounds us. ...

It has often been observed that there is a special connection between music and memory. This is what allows a song such as Tom Lehrer's *The Elements* (1959) to teach children the periodic table better than many chemistry courses. You don't need to have any

¹virtuoso — master

²avowed — self-proclaimed

³sitar — a type of stringed instrument

⁴proclivity — tendency

special training to benefit from the memory boost conferred by setting a text to music — it just works, because it's taking advantage of your own hidden musical abilities and inclinations. Music can also absorb elements of autobiographical memory — that's why you burst into tears in the grocery store when you hear the song that was playing when you
45 broke up with your boyfriend. Music soaks up all kinds of memories, without us being aware of what's happening.

What's less well-known is that the relationship goes both ways: memory also indexes music with astonishing effectiveness. We can flip through a radio dial or playlist at high speed, almost immediately recognising whether we like what's playing or not. In 2010,
50 the musicologist Robert Gjerdingen of Northwestern University in Illinois showed that snippets under 400 milliseconds — literally the blink of an eye — can be sufficient for people to identify a song's genre (whether it's rap, country or jazz), and last year [psychologist Carol Lynne] Krumhansl showed that snippets of similar length can be sufficient for people to identify an *exact song* (whether it's Public Enemy's *Fight the Power* or Billy Ray Cyrus's *Achy Breaky Heart*). That isn't long enough for distinctive aspects of a melody or theme to emerge; people seem to be relying on a robust and detailed representation of particular textures and timbral⁵ configurations — elements we might be very surprised to learn we'd filed away. And yet we can retrieve them almost instantly.

That fact becomes both more and less amazing when you consider just how steeped in
60 music we all are. If all the exposure in elevators and cafés and cars and televisions and kitchen radios was put together, the average person listens to several hours of music every day. Even when it isn't playing, music continues in our minds — more than 90 per cent of us report being gripped by a stubborn earworm at least once a week. People list their musical tastes on dating websites, using them as a proxy for their values and social affiliations. They
65 travel amazing distances to hear their favourite band. The majority of listeners have experienced chills in response to music: actual physical symptoms. And if you add some soaring strings to an otherwise ordinary scene in a film, it might bring even the hardiest of us to tears.

So, the next time you're tempted to claim you don't know anything about music, pause
70 to consider the substantial expertise you've acquired simply through a lifetime of exposure.

Think about the many ways this knowledge manifests itself: in your ability to pick out a playlist, or get pumped up by a favourite gym song, or clap along at a performance. Just as you can hold your own in a conversation even if you don't know how to diagram a sentence, you have an implicit understanding of music even if you don't know a submediant from a
75 subdominant. ...

When we acknowledge how, just by living and listening, we have all acquired deep musical knowledge, we must also recognise that music is not the special purview of professionals. Rather, music professionals owe their existence to the fact that we, too, are musical. Without that profound shared understanding, music would have no power to move us.

—Elizabeth Hellmuth Margulis
excerpted and adapted from “The Music in You”
aeon.co, January 8, 2015

⁵timbral — tone quality

- 15 According to lines 9 through 11, most non-musicians view their musical ability as
- (1) limited
 - (3) admirable
 - (2) comical
 - (4) average
- 16 Lines 17 through 24 support a central idea by emphasizing the
- (1) differences between virtuoso musical performers and ordinary people
 - (2) similarity of musical preferences between different cultures of people
 - (3) necessity of training for people to become musical experts
 - (4) way that people naturally learn about music through experience
- 17 Lines 25 through 29 demonstrate that the average person, with basic musical knowledge,
- (1) will be amused by an alteration of a familiar scale
 - (2) will find discomfort in an incomplete familiar scale
 - (3) can adapt incomplete scales to make original music
 - (4) can recognize the scale patterns of other cultures
- 18 Acquiring a “kind of bi-musicality” (lines 34 and 35) is the result of
- (1) studying the history of music composition
 - (2) experiencing multiple musical traditions
 - (3) developing an understanding of contemporary music
 - (4) participating in classical musical performances
- 19 Lines 43 through 46 convey the idea that music can affect a person by
- (1) eliminating unpleasant memories
 - (2) evoking past emotions
 - (3) maintaining stable moods
 - (4) modifying negative attitudes
- 20 The phrase “gripped by a stubborn earworm” (line 63) most likely refers to music
- (1) overplayed on the radio
 - (2) trending on social media
 - (3) connected to one’s past
 - (4) repeating in one’s head
- 21 The idea presented in lines 69 and 70 is best reflected by which phrase?
- (1) “But when we think about musical expertise, we tend to imagine professionals” (lines 13 and 14)
 - (2) “there is a special connection between music and memory” (lines 38 and 39)
 - (3) “Music can also absorb elements of auto-biographical memory” (line 43)
 - (4) “just by living and listening, we have all acquired deep musical knowledge” (lines 76 and 77)
- 22 The comparison in lines 72 through 75 highlights the notion that musicality
- (1) depends upon language skills
 - (2) requires knowing the structure
 - (3) is as natural as speech
 - (4) is based on interaction with others
- 23 As used in line 77, the phrase “the special purview” most nearly means
- (1) easily composed by
 - (2) readily recalled by
 - (3) only valued by
 - (4) only comprehended by
- 24 The author advances the argument through use of
- (1) questions
 - (3) statistics
 - (2) examples
 - (4) imagery

Part 2

Argument

Directions: Closely read each of the **four** texts provided on pages 13 through 19 and write a source-based argument on the topic below. You may use the margins to take notes as you read and scrap paper to plan your response. Write your argument beginning on page 1 of your essay booklet.

Topic: Should cities ban single-use “Styrofoam” products?

Your Task: Carefully read each of the **four** texts provided. Then, using evidence from at least **three** of the texts, write a well-developed argument regarding whether or not cities should ban single-use “Styrofoam” products. Clearly establish your claim, distinguish your claim from alternate or opposing claims, and use specific, relevant, and sufficient evidence from at least **three** of the texts to develop your argument. Do *not* simply summarize each text.

Guidelines:

Be sure to:

- Establish your claim regarding whether or not cities should ban single-use “Styrofoam” products
- Distinguish your claim from alternate or opposing claims
- Use specific, relevant, and sufficient evidence from at least **three** of the texts to develop your argument
- Identify each source that you reference by text number and line number(s) or graphic (for example: Text 1, line 4 or Text 2, graphic)
- Organize your ideas in a cohesive and coherent manner
- Maintain a formal style of writing
- Follow the conventions of standard written English

Texts:

Text 1 – Pros & Cons of Styrofoam

Text 2 – Why Styrofoam Is So Bad For the Environment

Text 3 – Statewide Polystyrene Ban Would Bring Unintended Consequences

Text 4 – In the Sea, Not All Plastic Lasts Forever

Text 1

Pros & Cons of Styrofoam

Styrofoam is probably not what you think it is. Technically, Styrofoam is the trademark name for a product that's used to insulate buildings. The white little cups and cheap takeout containers that you might think of as Styrofoam are made of something similar called expanded polystyrene foam, or EPS. Much like the debate over paper versus plastic, the use of EPS for foam food ware¹ and packing materials remains an ongoing controversy between companies looking out for their bottom line and environmentalists looking out for Mother Earth. Like anything else, EPS has both advantages and disadvantages.

Advantages of EPS

The food service industry generally favors EPS for food ware because it's less expensive than other products and provides better insulation, which helps keep food fresh longer. EPS creates versatile containers that can maintain temperatures for both hot and cold food and beverage items. While opponents of EPS argue that it's bad for the environment, manufacturing products from polystyrene uses less energy and resources than their paper counterparts. EPS products weigh less than paper, which helps reduce air emissions during transportation.

Disadvantages of EPS

Environmentalists generally disapprove of EPS foam products because they claim it wreaks havoc² on the environment. One of the main concerns regarding EPS foam is that it's not biodegradable and therefore takes up a lot of space in landfills, which adds to the pollution problem. If littered, EPS foam sometimes breaks into smaller pieces that are more difficult to clean up. Another argument against EPS foam is that it's made from nonrenewable fossil fuels and synthetic chemicals, which can also contribute to pollution. EPS foam sometimes makes its way into waterways and can have disastrous effects on animals that may confuse it for food or nesting material. While EPS foam can be recycled, doing so is often costlier than manufacturing new foam.

EPS Bans

The controversy over whether EPS foam products are environmentally friendly has led some cities, such as New York, to ban the use of EPS foam for single-use food ware containers and product packaging. The idea is that banning such products will reduce littering and protect some of the animals that mistake EPS waste for food or nesting material. Opponents of EPS bans, however, argue that banning EPS foam isn't the answer because it only leads to the use of alternative products that cause even more environmental problems than EPS foam itself.

—Kristina Barrosa
“Pros & Cons of Styrofoam”
sciencing.com, June 25, 2018

¹food ware — containers

²wreaks havoc — causes great damage

Text 2

Why Styrofoam Is So Bad For the Environment

Everyone knows that Styrofoam is bad for the planet, but do you know exactly why? Here's a hint: it's not just about biodegradability. Styrofoam has become such an accepted everyday product that people often don't understand how Styrofoam harms the environment.

5 Styrofoam is made from polystyrene, which is a petroleum-based plastic. Styrofoam is actually the trade name for polystyrene. It's popular because of its light weight, good insulation properties, and advantage as a packing material for shipping without adding weight. Unfortunately, for all of Styrofoam's good points, data has shown that Styrofoam also has harmful effects.

On Human Health

10 Let's take a look at the elements used to make Styrofoam. Styrene is the foundational ingredient used to make polystyrene. It is broadly used in the manufacture of plastics, resins and rubber. The U.S. Environmental Protection Agency (EPA) and the International Agency for Research on Cancer have established styrene as a possible human carcinogen.¹ Those who work in styrene product manufacturing and are regularly exposed to high levels of styrene have experienced acute health effects, including the following:

- 15 • Irritation of the skin
• Irritation of the eyes
• Irritation of the upper respiratory tract
• Gastrointestinal effects

20 Chronic exposure to styrene leads to further complications, including effects on the nervous system. Symptoms of chronic exposure include those listed below:

- 25 • Depression
• Headache
• Fatigue
• Weakness
• Minor effects on kidney function

Styrofoam containers are commonly used for take-out food, but chemicals can leach² into it and contaminate that food, affecting human health and reproductive systems. This effect is further accentuated if food is reheated while still in the container. NEVER heat Styrofoam: always remove food to a cooking vessel for reheating.

On the Environment...

30 Styrofoam can be recycled, but the market for recycled Styrofoam is diminishing. Many recycling companies no longer will accept polystyrene products. Those that are recycled can be remanufactured into things like cafeteria trays or packing filler.

35 Along with the health risks associated with the manufacture of polystyrene, air pollution is another concern. The National Bureau of Standards Center for Fire Research has found 57 chemical byproducts released during the creation of Styrofoam. This not only pollutes the air, but also results in liquid and solid toxic waste that requires proper disposal. Another cause for concern are the brominated flame retardants that are used on Styrofoam products. Research suggests that these chemicals may have negative environmental and health effects.

¹carcinogen — cancer-causing substance

²leach — seep

Styrofoam manufacture also uses hydrofluorocarbons (HFCs), which negatively impact
40 the ozone layer and climate change. HFCs are less detrimental to the ozone than chlorofluorocarbons (CFCs), which were used in the manufacturing of Styrofoam in the past, but it is thought that the impact of HFCs on climate change is much more serious.

Lastly, Styrofoam is made from petroleum, which is a non-sustainable resource, the production of which creates heavy pollution and accelerates climate change.

Alternatives to Styrofoam

45 According to the EPA, Americans trash approximately 25 billion Styrofoam cups and take-out containers every year. Compostable³ food service packaging is very trendy right now as an “ecologically correct” option. Compostable containers are made, using corn starch, palm fiber, peat fiber and wheat stocks; and they’re able to break down into soil-enriching compost.

50 Scientists have hope for developing a suitable replacement for Styrofoam. A company named Ecovative Design has created a line of products made from fungi and agricultural waste that are Styrofoam-like and aspire to be a more environmentally friendly replacement.

55 Already, a number of independent restaurants and food service brands worldwide, such as Dunkin’ Donuts, have shown how compostable containers can be used as a practical alternative. Several years ago, coffee retailer Tully’s began serving its popular beverages in compostable cups.

60 New York City; Washington, D.C.; Seattle; San Francisco and many more municipalities have announced that food service establishments, stores, and manufacturers may not possess, sell, or offer for use single-service Expanded Polystyrene (EPS) foam articles or polystyrene loose fill packaging, such as “packing peanuts.” ...

Statewide Polystyrene Ban Would Bring Unintended Consequences

Supposedly civic-minded prohibitions on consumer conveniences always have unintended consequences. California's single-use plastic bag ban, for instance, has led to a surge in E. coli infections, created a swarm of thicker plastic bags that are a greater environmental hazard than the outlawed single-use plastic bags, boosted shoplifting, and
5 been the cause of countless broken eggs fumbled by shoppers trying to carry too many groceries in their arms.

The growing prohibitions on polystyrene, known to most by its brand name Styrofoam, will too yield unpleasant unintended consequences. The ban is not yet statewide, but legislative proponents will surely try again in 2019 to outlaw it in all of California after
10 legislation failed in each of the last two years.

In the meantime, 119 cities and counties have some type of foam ban, with the city of San Diego soon to become the 120th.

The goal is to rid our streets, sidewalks, parking lots, open fields, beaches, and waterways of used polystyrene. It's an admirable objective, and bans will certainly reduce the amount
15 of foam in the litter stream. But bans won't have a net positive impact. Styrofoam litter will simply be replaced by the alternatives to polystyrene take-out food containers and drink cups. A California Water Resources Control Board report says there would be no improvement because "mere substitution would not result in reduced trash generation if such product substitution would be discarded in the same manner as the banned item."

20 When and where polystyrene is banned, businesses and consumers are forced to bear the costs of transitioning to other materials. In some cases, according to the California Restaurant Association, costs will more than double. Recycle Nation says that a paper cup costs about two-and-one-half times what a Styrofoam cup costs.

The San Diego City Council has acknowledged how taxing a ban will be by providing
25 some small businesses with hardship waivers allowing them to slowly transition to alternatives. Yet that might not be enough. Many small businesses operate on such narrow profit margins that a ban, even one including waivers, could be a death sentence for them.

A key point being ignored in the debate is that a ban would have a negative environmental
30 impact. Recycle Nation tells us that "it appears that going with Styrofoam is more eco-friendly compared to a paper cup," due in part to the added resources needed to produce paper cups. They require 12 times more water and 36 times as much electricity to manufacture. A Dutch study further found sourcing material for foam cups and shipping uses 22 percent less petroleum than is needed for paper cups, and producing foam cups doesn't require the use of harsh chemicals such as chlorine dioxide, which is needed to bleach the pulp used to
35 make cups.

A ban would also unfairly isolate targeted businesses. Less than half of foam litter is made up of food-service products, says Steven Stein, principal of the Washington-based Environmental Resources Group, who "toured" the Los Angeles River and wrote in the Los Angeles Times that what he found was "a snapshot of what's typically discarded throughout
40 the county."

“Foam transport packing materials used to protect shipments from breakage,” which cannot be covered by bans, makes up more than half of all polystyrene litter, says Stein.

It’s also worth noting that businesses paying more for polystyrene alternatives aren’t the guilty parties throwing foam into the litter stream. Yet the few who are ruining things for the many aren’t held culpable¹ by the prohibitionists.

Pursuing the polluters is a sensible approach. The California Water Resources [Control Board] has said that “ensuring compliance with existing statewide and local litter laws and ordinances would eliminate the substantial adverse environmental and economic impacts” from all litter, as well as preclude² “the need for additional structural or institutional controls that generate their own nominal adverse environmental impacts.”

Communities know where their worst litter problems are located and should focus enforcement resources on those areas. It seems that in a state so obsessed with environmental perfection, officials would concentrate first on the source of the problem, litterbugs, rather than law-abiding businesses and consumers who just want to complete their transactions without government interference.

Bans, though, are more visible. They allow politicians to make a public show of their virtue. But they also create their own sets of problems. Lawmakers need to be mindful of the damage they can do before they legislate for political gain rather than rational reasons. It’s a reality they should take into account when the statewide polystyrene ban comes up again in Sacramento.

In the Sea, Not All Plastic Lasts Forever

A major component of ocean pollution is less devastating and more manageable than usually portrayed, according to a scientific team at the Woods Hole Oceanographic Institution on Cape Cod, Mass., and the Massachusetts Institute of Technology [MIT].

Previous studies, including one last year by the United Nations Environment Program, 5 have estimated that polystyrene, a ubiquitous¹ plastic found in trash, could take thousands of years to degrade, making it nearly eternal. But in a new paper, five scientists found that sunlight can degrade polystyrene in centuries or even decades.

“Policymakers generally assume that polystyrene lasts forever,” Collin P. Ward, a marine chemist at Woods Hole and the study’s lead author said in a statement on Thursday 10 [October 10, 2019]. “That’s part of the justification for writing policy that bans it.” A main rationale for his team’s study, he added, “was to understand if polystyrene actually does last forever.”

Polystyrene, one form of which often carries the brand name Styrofoam, is used to manufacture single-use cups, straws, yogurt containers, disposable razors, plastic tableware, 15 packing materials and many other everyday items, which are discarded daily by the ton. Much of it ends up in the ocean. A swirling mass of throwaway junk known as the Great Pacific Garbage Patch, located between Hawaii and California, is estimated to occupy an area roughly twice the size of Texas.

Many nations, companies, citizen groups and ocean institutes, as well as United Nations 20 programs, have worked hard to ban single-use items and better regulate their disposal.

“We’re not calling the concerns or the actions wrong,” Christopher M. Reddy, a marine chemist at Woods Hole and another author on the study, said in an interview. “We just have a new thread to add and we think it’s significant.” ...

It’s common knowledge that sunlight can cause plastics to weather. “Just look at plastic 25 playground toys, park benches, or lawn chairs, which can rapidly become sun-bleached,” Dr. Ward noted in the Woods Hole statement.

The new study demonstrated that sunlight does even more, breaking down polystyrene into basic chemical units of organic carbon, which dissolves in seawater, and trace amounts of carbon dioxide, at levels far too low to play a role in climate change. By the end of this 30 process the plastic has effectively disappeared from the environment.

In the paper, the researchers described the study as “the first direct evidence” of how sunlight can break down polystyrene in the environment into its basic chemical building blocks.

Previous studies focused largely on the degrading effect of microbes. That made sense, 35 Dr. Reddy said, because microbes can eat many forms of organic carbon. But, he added, the chemical structure of polystyrene — particularly its backbone of large, ringed molecules — made the plastic unappetizing to decomposing bacteria.

However, that same molecular backbone turned out to be “the perfect shape and size to catch certain frequencies of sunlight,” Dr. Reddy said. And the energy that is absorbed breaks 40 the chemical bonds.

¹ubiquitous — found everywhere

In the lab, the researchers tested five different samples of polystyrene to see if sunlight could tear them apart. The team submerged each sample in a sealed glass container of water and exposed it to light from a solar simulator, a special lamp that mimics the frequencies of sunlight. The scientists then studied the water for evidence of breakdown products.

45 With sophisticated tools of detection and analysis, Dr. Ward and his colleagues then traced the origin of the loose materials back to the polystyrene. “We used multiple methods, and they all pointed to the same outcome,” he said in the statement: sunlight can turn polystyrene from a solid material back into basic chemical units.

50 The study also found that additives to polystyrene, which can determine its color, flexibility and other physical features, can slow or speed decomposition.

In a joint interview, Dr. Ward and Dr. Reddy said that one remaining puzzle concerns the exact nature of the dissolved organic carbon, which is too small in size to form visible particles. “We feel confident we can figure it out,” Dr. Reddy said.

55 The research team included Cassia J. Armstrong and Julia H. Jackson of Woods Hole, and Anna N. Walsh of Woods Hole and the Massachusetts Institute of Technology.

In the paper, the authors noted that the newly identified means of polystyrene breakdown “should be incorporated into global fate models” for plastics and help frame policy. None of the current inventories “account for degradation,”² Dr. Ward noted.

60 In the interview, he and Dr. Reddy suggested that the new finding might eventually shed light on one of the outstanding mysteries of ocean pollution: that more than 99 percent of the plastic that should be identifiable is missing. Expeditions that have specifically looked for evidence of the calculated mass of plastic have repeatedly come up with surprisingly low returns.

65 In time, Dr. Ward said, the accelerating search for the breakdown products of polystyrene and other kinds of oceanic pollution may let scientists “balance the books.”

²degradation — deterioration

Part 3

Text-Analysis Response

Your Task: Closely read the text provided on pages 21 and 22 and write a well-developed, text-based response of two to three paragraphs. In your response, identify a central idea in the text and analyze how the author's use of **one** writing strategy (literary element or literary technique or rhetorical device) develops this central idea. Use strong and thorough evidence from the text to support your analysis. *Do not* simply summarize the text. You may use the margins to take notes as you read and scrap paper to plan your response. Write your response in the spaces provided on pages 7 through 9 of your essay booklet.

Guidelines:

Be sure to:

- Identify a central idea in the text
- Analyze how the author's use of **one** writing strategy (literary element or literary technique or rhetorical device) develops this central idea. Examples include: characterization, conflict, denotation/connotation, metaphor, simile, irony, language use, point-of-view, setting, structure, symbolism, theme, tone, etc.
- Use strong and thorough evidence from the text to support your analysis
- Organize your ideas in a cohesive and coherent manner
- Maintain a formal style of writing
- Follow the conventions of standard written English

The Kitchen

In this excerpt from a memoir, the narrator recalls his childhood in Brownsville—a neighborhood in Brooklyn, New York—in the early part of the 20th century.

...In Brownsville tenements the kitchen is always the largest room and the center of the household. As a child I felt that we lived in a kitchen to which four other rooms were annexed. My mother, a “home” dressmaker, had her workshop in the kitchen. She told me once that she had begun dressmaking in Poland at thirteen; as far back as I can remember,
5 she was always making dresses for the local women. She had an innate sense of design, a quick eye for all the subtleties in the latest fashions, even when she despised them, and great boldness. For three or four dollars she would study the fashion magazines with a customer, go with the customer to the remnants¹ store on Belmont Avenue to pick out the material, argue the owner down—all remnants stores, for some reason, were supposed to
10 be shady, as if the owners dealt in stolen goods—and then for days would patiently fit and baste² and sew and fit again. Our apartment was always full of women in their housedresses sitting around the kitchen table waiting for a fitting. My little bedroom next to the kitchen was the fitting room. The sewing machine, an old nut-brown Singer with golden scrolls painted along the black arm and engraved along the two tiers of little
15 drawers massed with needles and thread on each side of the treadle,³ stood next to the window and the great coal-black stove which up to my last year in college was our main source of heat. By December the two outer bedrooms were closed off, and used to chill bottles of milk and cream, cold borscht⁴ and jellied calves’ feet. ...

The kitchen gave a special character to our lives; my mother’s character. All my
20 memories of that kitchen are dominated by the nearness of my mother sitting all day long at her sewing machine, by the clacking of the treadle against the linoleum floor, by the patient twist of her right shoulder as she automatically pushed at the wheel with one hand or lifted the foot to free the needle where it had got stuck in a thick piece of material. The kitchen was her life. Year by year, as I began to take in her fantastic capacity for labor and
25 her anxious zeal, I realized it was ourselves she kept stitched together. I can never remember a time when she was not working. She worked because the law of her life was work, work and anxiety; she worked because she would have found life meaningless without work. She read almost no English; she could read the Yiddish⁵ paper, but never felt she had time to. We were always talking of a time when I would teach her how to read, but
30 somehow there was never time. When I awoke in the morning she was already at her machine, or in the great morning crowd of housewives at the grocery getting fresh rolls for breakfast. When I returned from school she was at her machine, or conferring over *McCall’s*⁶ with some neighborhood woman who had come in pointing hopefully to an illustration—“Mrs. Kazin! Mrs. Kazin! Make me a dress like it shows here in the picture!”
35 When my father came home from work she had somehow mysteriously interrupted herself to make supper for us, and the dishes cleared and washed, was back at her machine. When I went to bed at night, often she was still there, pounding away at the treadle, hunched over

¹remnants — pieces of fabric

²baste — loosely stitch

³treadle — a pedal on a sewing machine that requires continuous movement of the foot to operate

⁴borscht — beet soup

⁵Yiddish — Germanic language traditionally spoken by Ashkenazi (or Eastern European) Jews

⁶McCall’s — a women’s magazine

the wheel, her hands steering a piece of gauze under the [sewing machine] needle with a finesse that always contrasted sharply with her swollen hands and broken nails. Her left hand had been pierced through when as a girl she had worked in the infamous Triangle Shirtwaist Factory on the East Side. A needle had gone straight through the palm, severing a large vein. They had sewn it up for her so clumsily that a tuft of flesh always lay folded over the palm.

The kitchen was the great machine that set our lives running; it whirred down a little
40 only on Saturdays and holy days. From my mother's kitchen I gained my first picture of life
45 as a white, overheated, starkly lit workshop redolent⁷ with Jewish cooking, crowded with
women in housedresses, strewn with fashion magazines, patterns, dress material, spools of
thread—and at whose center, so lashed to her machine that bolts of energy seemed to dance
50 out of her hands and feet as she worked, my mother stamped the treadle hard against the
floor, hard, hard, and silently, grimly at war, beat out the first rhythm of the world for
me.

At night the kitchen contracted around the blaze of light on the cloth, the patterns,
the ironing board where the iron had burned a black border around the tear in the muslin
cover; the finished dresses looked so frilly as they jostled on their wire hangers after all the
55 work my mother had put into them. And then I would get that strangely ominous smell of
tension from the dress fabrics and the burn in the cover of the ironing board—as if each
piece of cloth and paper crushed with light under the naked bulb might suddenly go up in
flames. Whenever I pass some small tailoring shop still lit up at night and see the owner
60 hunched over his steam press; whenever in some poorer neighborhood of the city I see
through a window some small crowded kitchen naked under the harsh light glittering in the
ceiling, I still smell that fiery breath, that warning of imminent fire. I was always holding my
breath. What I must have felt most about ourselves, I see now, was that we ourselves were
like kindling—that all the hard-pressed pieces of ourselves and all the hard-used objects in
65 that kitchen were like so many slivers of wood that might go up in flames if we came too
near the white-blazing filaments in that naked bulb. Our tension itself was fire, we ourselves
were forever burning—to live, to get down the foreboding in our souls, to make good.
